

MANAGE SCHEDULED REPORTS ACROSS YOUR SITE

Automatically generating reports and sending them to interested users via the Scheduled Reports feature has been a timesaver for many administrators. Totara Learn 11 now features a range of Scheduled Reports management tools to help keep track of all reports.

A new Scheduled Report source offers insight into reports being sent out from your system, and new report settings alongside a 'create/manage scheduled report' capability provide more granular control over this functionality.

Report managers can now also opt to send Scheduled Reports directly to their inbox.

GET MORE OUT OF YOUR FEATURED LINKS BLOCK

Designed to allow non-designers to quickly and easily create graphic-based navigation, the Featured Links block sees a range of new display options within Totara Learn 11.

Program and Certification tiles are now available, allowing learners to head straight to a learning overview page and launch each linked course.

Featured Links 2.0 also now supports square, landscape, portrait and full-width display of tile images as well as the ability to show completion progress on course tiles.

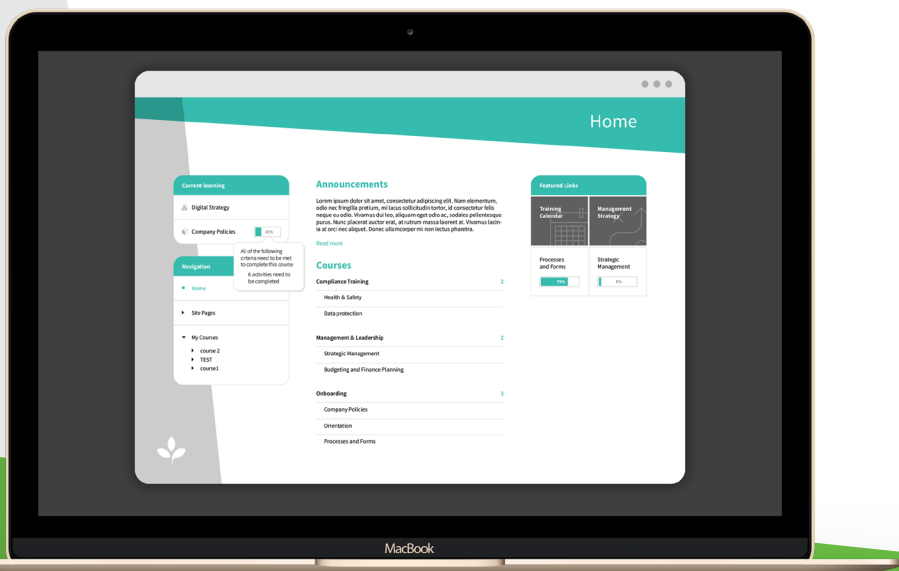

ADD NEW ACTIVITY ACCESS RESTRICTIONS

Creating a multi-audience, multi-purpose course is now even easier with a range of new access restrictions for activities and resources.

Course managers can create content specifically for learners assigned to a certain position or organisation, allowing team or job role-specific content to sit alongside other more general learning items.

Access to learning items can also now be restricted by a user's preferred language or membership to a particular audience.

Combine these new conditions with any of the existing restrictions to create courses which support a range of different learners and learning needs.
