MAKING A MEASURABLE DIFFERENCE IN HEALTHCARE

An investment in people is in the seventh wave of the global digital transformation. It’s the future of what we do, it’s the future of how we do it, and it’s the future of how we think. In healthcare, there’s a renewed focus on the patient, on improving quality and, conversely, reducing costs. The future of healthcare is at risk unless we make a change in the way healthcare is delivered.

OECD reports for 2016 show that the healthcare sector is the highest paying sector in the world, with many employees working long hours, many without the tools they need. The ability to keep up with the latest training and development is crucial to the delivery of the highest quality of care.

Healthcare systems are notoriously fragmented, and there is a shortage of healthcare employees at all levels. Healthcare organisations everywhere.

Using open, flexible learning technology is key to success in the healthcare sector. At the same time budgets are squeezed and over in the USA alone there are over 70,000 employees who require training.

More than 45% of organisations in high-consequence industries do not feel thoroughly prepared for a compliance audit. Over a third of employees in high-consequence industries, such as healthcare, are uninsured for medical care. Nearly 45,000 Americans die each year as a direct result of being uninsured.

The rise in the number of people aged 65 and over in the USA is expected to be a worldwide disaster. By 2030, there is expected to be a global shortage of healthcare employees at all levels.

Today’s learners are used to learning anywhere, any time. They expect companies to provide them with the same tools they use on their personal devices.

At a time when budgets are squeezed, these tools and technologies are more important than ever. Healthcare organisations everywhere.

The investment in people is in the seventh wave of the global digital transformation.
